

TITLE	Add notifications when subscribing to a newsletter	
WHY?	Adding notifications helps to successfully subscribe to the newsletter in order to attract the attention of an increasing number of new users of our product.	
TODO	<p>Add notifications after the user enters the email address, right under the newsletter subscription box</p> <p>1. If the user entered an incorrect email: "fdsfsfs", then the notification text appears in red letters under the email input form</p> <p>2. If the user has entered a valid email consisting of Username, @ symbol, and hostname (separated by ".") that does not exist in the database: then the notification text should be displayed under the subscribing box in green letters</p> <p>3. If the user has entered a valid email that already exists in the database, then the notification text in green letters should be displayed under the subscribing box</p> <p>4. If the user left the email input field empty and clicked the Subscribe button, a notification should be displayed under the subscribing box, in red letters</p>	
Content	<p>Notification text:</p> <p>1) Invalid email, please enter the valid email!</p> <p>2) Thank you! You have subscribed to the newsletter!</p> <p>3) You have already subscribed to the newsletter!</p> <p>4) Please enter your email!</p>
